

Problem 1 Components:

**A2.py:** Extracts 2000 Twitter links using Tweepy framework

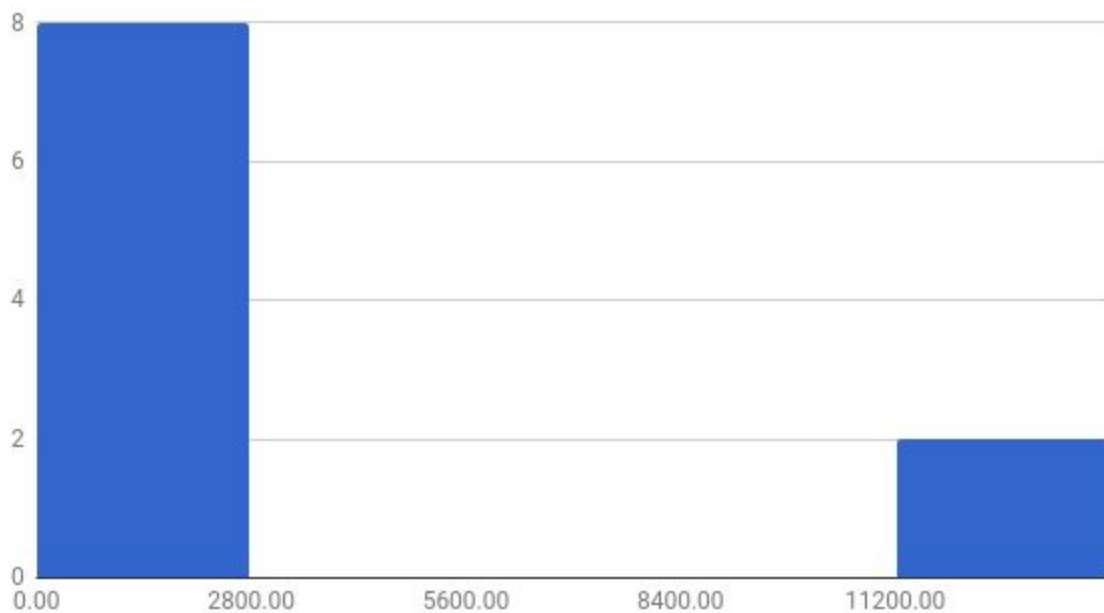

**checkuri.py:** Filters out any links holding the Twitter domain, and duplicates

Problem 2 Components:

**getjs.py:** Stores the 1000 JSON files from memgator

**parsejson.py:** Reads the number of mementos per JSON file

Histogram

Problem 3 Components:

**P3.py:** Reads URI list, and gets JSON files from Carbon Date

**P3parseJS.py:** Extracts each files estimation date, and reports status code.
